# Common Industry Information 

## Common industry information

## Organization abbreviations glossary

Common abbreviations for organizations often referred to in the electrical industry, and also noted throughout the Arrow Hart catalog

ANSI
American National Standards Institute, Inc.
ANSI is a private, non-profit organization that administers and coordinates the U.S. voluntary standardization and conformity assessment system. The Institute's mission is to enhance both the global competitiveness of U.S. business and the U.S. quality of life by promoting and facilitating voluntary consensus standards and conformity assessment systems and safeguarding their integrity.

## www.ansi.org

## CEC Title 24

California Energy Commission's Energy Efficiency Standards for Residential and Nonresidential Buildings
Part of the California State Building Code, Title 24 requires a minimum level of energy efficiency for all new heated or cooled structures, including additions and alterations to existing homes and most commercial buildings. Energy efficient lighting and controls must be incorporated per the current standards.
Energy-efficient lighting fixtures are required as well as the use of dimmers and vacancy/occupancy sensors. The standard covers all rooms in a home except closets under 70 square feet.

## www.energy.ca.gov/title24

## CSA

## Canadian Standards Association

The Canadian Standards Association is a not-for-profit, membership-based association that conducts product safety testing, and issues certifications.
www.csa.org

## GSA <br> General Services Administration Federal Supply Service

GSA's Federal Supply Service provides federal customers with a specific list of manufacturer's products that have been approved to meet stated requirements. The most frequently cited Federal Specifications regarding electrical wiring devices are those for Electrical Power Connector, Plug, Receptacle and Cable Outlet (Fed. Spec. W-C 596) and for Toggle and Lock, Flush Mounted Switches (Fed. Spec. W-S 896).
www.gsa.gov

## NEC

## National Electrical Code ${ }^{\circledR}$

Published by the NFPA (see listing) as NFPA 70, the National Electrical Code. This publication, renewed every 3 years under the auspices of ANSI, provides for the adequate protection of life and property from dangers associated with the use of electricity. It is now adopted and enforced in all 50 states in the United States and is also the basis for electrical codes in several other countries. www.nfpa.org

NEMA
National Electrical Manufacturers Association
Comprised of electrical manufacturers, NEMA provides a forum for the standardization and testing of electrical equipment, enabling consumers to select from a range of safe, effective, and compatible electrical products. NEMA-standards of testing is frequently required by both government and third-party endorsees such as UL and CSA prior to their approval.
www.NEMA.org

## NFPA

National Fire Protection Association
The mission of the international non-profit NFPA is to reduce the worldwide burden of fire and other hazards on the quality of life by providing and advocating scientifically based consensus codes and standards, research, training and education. The NFPA authors the NEC ${ }^{\circledR}$ and NPPA 70E electrical safety in the workplace.

## www.nfpa.org

## NOM

Normas Oficiales de México (Official Mexican Standards)
The Official Mexican Standards (referred to as Normas or NOMs) augment the Mexican Hazardous Materials Land Transportation Regulation and provide information relative to importing and exporting hazardous materials from and to Mexico.

## OSHA <br> Occupational Health and Safety Administration, U.S. Department of Labor

OSHA's mission is to assure safe and healthful working conditions for working men and women (having been authorized to enforce standards first created under the Occupational Health and Safety Act of 1970 and since evolved), by assisting and encouraging the States in their efforts to assure safe and healthful working conditions.
www.osha.gov

## UL <br> Underwriters Laboratories

Underwriters Laboratories Inc. (UL) is an independent, nonprofit product safety testing and certification organization.
www.ul.com

## NSF

National Sanitation Foundation
NSF International helps protect people by certifying products and writing standards for consumer goods. As an independent, not-for-profit organization, NSF works toward allowing everyone to live safer.
www.nsf.org

V Vacuum (typically used for portable cleaning equipment)

W Weather \& water resistant for damp \& wet locations

## Examples

SEOOW Extra hard usage thermoplastic elastomer with oil resistant outer jacket and insulation; approved for outdoor use and water resistance; 600 V up to $105^{\circ} \mathrm{C}$.

SJT Hard usage thermoplastic rubber-insulated conductors and overall thermoplastic jacket. 300 V up to $105^{\circ} \mathrm{C}$.
SJTW Hard usage thermoplastic or rubber-insulated conductors and overall thermoplastic jacket. 300 V up to $105^{\circ} \mathrm{C}$. Weather resistant for outdoor use.

SPT-2 Same as SPT-1, but heavier construction (18-16 gauge).
SPT-3 Same as SPT-2, but heavier construction (18-10 gauge).
SRDT Portable range or dryer cable, 3-conductor parallel type or 4 insulated conductors, jacketed. All thermoplastic construction. 300 V , maximum temperature of $60^{\circ} \mathrm{C}$.

HPN Two-conductor, neoprene-insulated heater cord. Parallel construction. For use in damp locations. $300 \mathrm{~V}, 90^{\circ} \mathrm{C}$.

SPT-1 All thermoplastic construction, parallel jacketed. 300 V up to $105^{\circ} \mathrm{C}$, 2 or 3 -conductor (18 gauge).

[^4]
## Matching the dimmer to the load

A large selection of lighting sources are available in today's lighting environment. These sources have specific individual characteristics which require mating a particular dimmer for each load type (source). For proper use it is important to pick a dimmer that is designed and UL tested for that specific lighting load type.

## Incandescent/halogen

Line-voltage tungsten filament lamps, including

## ( Fluorescent (FLR)

Electronic fluorescent dimming ballast
Special dimmers are designed and UL listed to send power and control signals to each type of electronic fluorescent dimming ballast.
Special requirements: rated for cold filament inrush. dinning ballast.
Magnetic Low-Voltage (MLV)
Magnetic transformer-supplied low-voltage lighting
( 6 volt, 12 volt, or 24 volt)
Light Emitting Diode (LED)
Electronic LED driver special dimmers are designed to send power and control signals to each type of electronic LED drive.
Special requirements: LED light source must be properly matched to LED driver, and LED driver must meet control spec for control type.
Special requirements: symmetric cycles (VDC $\leq 2$ ), smooth turn off
Include transformer losses when calculating the load.
Electronic Low-Voltage (ELV)
Electronic (solid-state) transformer-supplied
low-voltage lighting
Electrical characteristic: capacitive
Special characteristic: very smooth turn on.
Neutral wire connection required.

## Magnetic low-voltage dimmer ratings

The stated VA (volt-ampere) rating is the rated capacity of the dimmer which includes the magnetic transformer heat losses and the lamp load. A slide dimmer that is UL listed for 1000VA can be loaded with a full 1000 VA of lamp load. A transformer dissipates up to $20 \%$ of the connected load as heat.
Better transformers dissipate less than $10 \%$ as heat. Added together, the lamp load and the transformer loss determine the dimmer capacity required. See example.

## Electronic low-voltage dimmer ratings

Electronic Low-Voltage transformers do dissipate some heat. These inefficiencies are small enough to be accounted for in the dimmer rating. A dimmer this is UL listed for 600 W can be loaded with a full 600 W of lamp load. If ganged with other dimmers, standard derating rules apply.

## Heat dissipation

During normal operation, dimmers will get warm to the touch. Wallbox dimmer efficiency is typically around $99 \%$; the remaining $1 \%$ is dissipated as heat. Therefore, a 600 W load on a 600 W dimmer would produce around 6 watts of heat. Operating on its rated load, dimmers will stay below the UL limits of $140^{\circ} \mathrm{F}\left(60^{\circ} \mathrm{C}\right)$. Use screwless wallplates to avoid contact with metal screws that may feel warm to the touch.

## Single pole

Single pole dimmers provide control from one location.

Multi-location
H8BE
Multi-location dimmers can be used with dimmers for full dimming control of the lights from two or more locations.

## 3-Way/4-Way

## 88宿

3-Way dimmers adjust the light level from one location. When usedwith 3-Way and 4-way switches, the lights can be turned on to the dimmer level or off from many locations.

# Switch applications 

## Test requirements

The maximum permitted load for which a switch is suitable depends on the switch rating and the nature of the load. Proper selection of switches is determined by test standards and requirements of the National Electrical Code ${ }^{\oplus}$, Articles 380, 430, and 600.
General Use AC switches are suitable for use at full rated current and voltage on loads of fluorescent and incandescent lighting and for other inductive or resistance loads. Our switches are rated for motor loads at 80\% of their rated current.
Special Use AC switches may be used at full rating on resistance or inductive loads, including fluorescent. For incandescent (tungsten) lighting loads, they must carry an "L" rating. For motor loads they require an "HP" (horsepower) rating.
To ensure safety and reliability, Arrow Hart switches are tested, rated and marked according to various standards. The following charts indicate both the required performance tests specified by industry standards for switches with standard ratings, and the loads they may control.

Test requirements - switches general use - AC only

| Rating | Standard | Overload |  |  |  | Endurance |  | Resistance cycles $1.0 \mathrm{pf} .{ }^{\text {t }}$ | Inductive cycles . 75 to .8 pf. | Tungsten cycles 1.0 pf. |

Test requirements - switches special use - AC only

## WSB 896 Standard

All switches are subjected to resistive endurance, inductive endurance, tungsten endurance and then verified that they meet
less than a $86^{\circ} \mathrm{F}\left(30^{\circ} \mathrm{C}\right)$ temperature rise at rated current and
followed by a dielectric test at 1500 V/AC for 1 minute.
$\dagger$ Power Factor voltage,

## Switch applications

## Chemical resistant properties of common materials in wiring devices

SECTION

Key terms describing material enhancements

| Thermoplastic: | Material treated for UV stability to increase tensile strength and decrease discoloration when exposed to UV radiation. Manufactured by injection molding. <br> Superior resistance to impacts, chemical and solvent attack. |
| :--- | :--- |
| Thermoset: | Flame resistant material with dimensional stability. Manufactured by compression molding. |
| Glass filled: | Glass-filled material (most commonly nylon) yields increased material rigidity and permits operation at a higher temperature. |
| Nickel plated: | Plating of steel or brass with nickel to increase the corrosion-resistant properties of the metal component. |
| Zinc plated: | Plating of cold-rolled steel with zinc to increase the corrosion-resistant properties of the metal component or casing. |

| Materials | Acids | Alcohol | Caustic bases | Gasoline | Grease | Kerosene | Oil | Solvents | Water |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Nylon (Thermoplastic) | 3 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| Polycarbonate (Thermoplastic) | 2 | 1 | 3 | 2 | 2 | 2 | 2 | 3 | 1 |
| $302 / 304$ <br> Stainless steel | 2 | 1 | 3 | 1 | 1 | 1 | 1 | 2 | 1 |
| Polyvinyl Chloride (PVC) | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 3 | 1 |
| Polypropylene (Thermoplastic) | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 1 |
| PBT | 1 | 1 | 2 | 1 | 1 | 1 | 1 | 2 | 1 |
| Rubber $\ddagger$ <br> (Thermoplastic) | 2 | 2 | 1 | 3 | 2 | 3 | 1 | 3 | 1 |
| Phenolic <br> (Thermoset) | 2 | 1 | 2 | 1 | 1 | 1 | 1 | 1 | 1 |
| ABS <br> (Thermoplastic) | 2 | 2 | 1 | 1 | 1 | 2 | 2 | 3 | 1 |

Chemical resistance factor
1 - Completely resistant - good to excellent for general use when exposed to these factors.
2 - Resistance is fair to good - recommended for limited service when exposed to these factors.
3 - Slow attack. Not recommended for use when exposed to these factors.
*The chemical resistance factor represents general applications. Additional testing is required to determine resistance to chemicals in specific environments.
$\ddagger$ Thermoplastic rubber is representative of Santoprene.

## Eaton Wiring Device Cleaning Instructions

There is a greater awareness of the possibility of contamination on shared surfaces as well as high contact areas, such as wall plates, dimmers, switches, keypads and receptacles. Eaton has developed recommended guidelines for cleaning our products that will not impact the operation or finish of the product.

## Eaton Recommended Cleaning Tips

1. Never spray any fluids directly into the device
2. Use a damp rag or single-use wipe to avoid excess liquid penetrating the device.
3. Be sure to wipe up remaining excess liquid after cleaning.
4. Ensure the cleaning agent used does not have harsh chemicals such as bleach, ammonia, highly alkaline or concentrated acids (such as hydrochloric acid that can be found in household cleaners such as toilet bowl cleaners, bathroom tile and porcelain cleaners) as they could damage the device, causing them to become brittle and discolored.
5. Eaton recommends the use of a mild liquid detergent and water to clean the devices. Single use wipes (e.g. Lysol brand or equivalent) are acceptable to use for cleaning the devices, however the single-use wipes cannot contain bleach, ammonia, highly alkaline or concentrated acids.

## Eaton Recommended Cleaning instructions

1. Never spray any fluids directly into the device
2. Apply the mild liquid detergent to a damp cloth or paper towel. Single use wipes (e.g. Lysol brand or equivalent) are acceptable to use for cleaning the devices, however single-use wipes cannot contain bleach, ammonia, highly alkaline or concentrated acids.
3. If excess liquid is present, remove by wringing out the cloth or paper towel to avoid liquid penetration into the device.
4. Clean the Eaton device by wiping over the surface with the damp cloth.
5. Remove an excess liquid remaining on the device with a dry cloth or paper towel.

Additional resources for cleaning and disinfectant guidelines include:
The Center for Disease Control website (CDC.gov) provides a resource on disinfection guidelines for areas of your home or workspace. The Environmental Protection Agency (EPA.gov) site provides an up-to-date database of products that meet EPA criteria for use against COVID-19.

NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION
NEMA Standards publication no.250-1991, enclosures for electrical equipment (1000V max.)

## Intended use and description

An enclosure is a surrounding case that provides personnel with protection against incidental contact with enclosed equipment, and simultaneously protects enclosed equipment against specific environmental conditions.

## Type 1

Enclosures are intended for indoor use primarily to protect against limited amounts of falling dirt.

## Type 2

Enclosures provide a degree of protection, mainly indoors, against limited amounts of dripping water or falling dirt.

## Type 3

Enclosures, intended primarily for use outdoors, protect against rain, sleet, wind-blown dust, and damage from external ice formation

## Type 3R

Enclosures provide protection primarily against rain, sleet, and damage from external ice formation.

## Type 3S

Enclosures protect primarily against rain, sleet, and wind-blown dust, and enable external mechanisms to operate efficiently even when ice laden

## Type 4

Enclosures provide protection, both indoors and out, against wind-blown dust and rain, splashing or hosedirected water, and ice damage.

## Type 4X

Enclosures used both indoors and out to protect against corrosion, wind-blown dust and rain, splashing or hose-directed water, and damage caused by exterior ice formation.

## Type 5

Enclosures used primarily indoors to provide protection against airborne dust and dirt, and non-corrosive liquids.

## Type 6

Enclosures provide protection both indoors and out against hose-directed water, water entry during occasional short-term submersion at low-pressure depths, and damage caused by exterior ice formation.

## Type 6P

Enclosures protect both indoors and out against hose-directed water, water entry during long-term submersion at low-pressure depths, and ice damage.

## Type 12

Enclosures used primarily indoors to protect against airborne dust or dirt, and non-corrosive liquids.

## Type 12K

Enclosures with knockouts are used primarily indoors for protection against airborne dust and dirt, and noncorrosive liquids.

## Type 13

Enclosures used primarily indoors to protect against dust, as well as accidental spraying by water, oil, or non-corrosive coolants.

Compliances, specifications and availability are subject to change without notice.

UNDERWRITERS LABORATORIES UL50
Standard for enclosures for electrical equipment (10th Edition)

## Intended use and description

An enclosure is a surrounding case that protects equipment enclosed within against incidental contact, as well as specific environmental conditions. A complete enclosure shall be provided for all live parts that may be housed in it. Such an enclosure shall be tight and come with a means for mounting, unless it's designed for a special installation, for example, a cast metal junction or pull-box intended for installation in poured concrete.

## Type 1

Enclosures are intended for indoor use primarily to protect against limited amounts of falling dirt.

## Type 2

Enclosures provide a degree of protection, mainly indoors, against limited amounts of dripping water or falling dirt.

## Type 3

Enclosures, intended primarily for use outdoors, protect against rain, sleet, wind-blown dust, and damage from external ice formation

## Type 3R

Used primarily outdoors for protection against rain, sleet, and exterior damage caused by the formation of ice.

## Type 3S

Used primarily outdoors for protection against rain, sleet, and wind-blown dust, and to enable exterior mechanisms to operate when ice laden.

## Type 4

For indoor and outdoor use to protect against windblown dust and rain, splashing or hose-directed water, and damage caused by exterior ice formation.

## Type 4X

For protection indoors and out from corrosion, windblown dust and rain, splashing or hose-directed water, and damage caused by exterior ice formation.

USMCA compliant products meet specifications at time of print. Product listing subject to change.
For specific product details visit www.eaton.com/wiringdevices or email TechSupport@eaton.com

Buy American Provision, American Recovery and Reinvestment Act (ARRA) (Section 1605)

ARRA Section 1605 establishes requirements for federal government projects funded with stimulus monies: "None of the funds appropriated or otherwise made available by [the ARRA] may be used for a project for the construction, alteration, maintenance, or repair of a public building or public work unless all of the iron, steel, and manufactured goods used in the project are produced in the United States." Iron and steel used as components or subcomponents of other manufactured construction materials do not need to be produced in the United States. There is no requirement that components and subcomponents be U.S.origin provided the manufactured construction material is "produced in the United States." (FAR 25.001(c) (4)) Section 1605 does not contain a domestic cost requirement. However, the government has not defined "produced" for purposes of the ARRA Buy American provision. Many commentators have adopted the "substantial transformation" test to determine whether a manufactured article is "produced" in the United States for purposes of Section 1605. Section 1605 contains a requirement that the Buy American provision be applied in a manner consistent with U.S. obligations under international agreements. As a result, national treatment is extended to products from countries with which the United States has entered a free trade agreement (e.g., Canada, Mexico, Bahrain, Chile, etc.) and to products from countries that have signed the WTO Government Procurement Agreement. National treatment is also extended to least developed countries (LDCs) (e.g., Bhutan, Mali, Zambia, etc.) but not to Caribbean basin countries (e.g., Belize, Haiti, Bahamas, etc.). Products that are identified as USMCA compliant may qualify under the Buy American Act or ARRA program guidelines. Consult specific project guidelines and compliance requirements to assure suitability for your project needs.

Buy American Act (US Code, Title 41, Section 10 (a-d))
The Buy American Act (often BAA, not to be confused with the Buy America (no " $n$ ") Act) applies to all U.S. federal government agency purchases of goods over certain contract thresholds. The BAA restricts purchases of supplies and construction materials to domestic products, unless an exception or waiver applies. Unmanufactured products must be mined or produced in the United States. There is a two-part test for manufactured articles: (1) article must be manufactured in the United States, and (2) cost of U.S. components must exceed 55\% of the cost of all components in the item. Note: this calculation does not include labor and overhead for final assembly in the United States. The component cost test is waived for commercial-off-the-shelf (COTS) items. (FAR 25.001(c)(1). BAA waivers may be available, often at the discretion of the contracting officer.

Restriction of the use of certain hazardous substances (RoHS) For more information visit eaton.com/us/en-us/products/productstewardship or email ProductStewardship-ES@Eaton.com
